

HALIMA GHAFOOR, MD  
8104 OLD CR 54  
TRINITY, FL 34655

Patient: LUTES, MINNIE K  
MRN: 5234156129842  
Sex: F  
DOB: 07-Aug-1973

**16-May-2017**

**Ultrasound Pelvic/Transvaginal:**

**Clinical Hx: Dyspareunia**

**Technique:** Gray scale transabdominal and transvaginal imaging was performed.

**Findings:** The uterine myometrium is homogeneous in echotexture without focal masses. The endometrial complex is normal in echotexture. The endometrial stripe measures 14 mm in thickness and most likely related to secretory phase of menstruation.

The uterus measures 8.4 x 4.3 x 5.1 cm. Nabothian cyst within the cervix is seen.

Both ovaries are seen. The right ovary measures 2.6 x 1.7 x 1.6 cm and the left ovary measures 4.1 x 2 x 1.8 cm. No enlarged solid or cystic adnexal mass. A hemorrhagic dominant follicle within the left ovary measures 1.9 x 1.7 cm.

Trace amount of free fluid within the cul-de-sac is most likely physiologic. No focal fluid collection is seen.

**Impression:**

1. Negative pelvic and transvaginal exam. If concern persists, consider a female pelvic MRI with and without contrast for further evaluation.

Thank you HALIMA GHAFOOR, MD for allowing Excel Medical Imaging to participate in the care of your patient.
